

Big Brain Way

QUE DOT INC.

BBW Services

The three pillars, the public service names, and the journeys ladder

DOCUMENT	ISSUED	OWNER	CATALOG
Services catalog	18 August 2026 · v2	Mansoor Qureshi	Ratified 2026-07-18

SITE CHECKED
18 August 2026

Internal — for the Big Brain Way team. Sourced from the ratified BBWOPS catalog and reconciled against the live bigbrainway.com site. Not for distribution outside the firm.

THE SHAPE OF THE CATALOG

Everything we sell lives under three pillars — and there is no tier ladder

Every pillar has an entry product, recurring subscriptions, and licensed applications. All licenses are access-controlled by Big Brain Way — we grant and revoke them.

We sell a **relationship that deepens through journeys**, not sizes of the same package. Never describe the offering as bronze/silver/gold, small/medium/large, or any tier structure.

WEBSITE CONFLICT — READ BEFORE QUOTING

The live **bigbrainway.com** site has **not** been updated to the catalog ratified on 2026-07-18. It still publishes retired tier names, a superseded plan structure, and prices below the current floor. Where this document and the website disagree, **this document is the ratified position** and the website is out of date. Full reconciliation is in the Pricing document.

TRANSLATION

The website sells different words than the catalog — here is the map

Prospects arrive using the website's vocabulary. Recognise what they are asking for, then quote the catalog product. This table is the bridge.

WHAT THEY SAY (FROM THE SITE)	WHAT WE QUOTE (CATALOG)
Vector Search Optimization · Map Authority · GBP Optimization · Reputation Engineering	Visibility Core — these are components of the Multimodal Optimization Stack, not separately-priced products
Social & Content · "AI Content Pipeline"	Content Fabric (included at Core; expansion module beyond)
Web Pages & Funnels · Smart Funnels	Conversion Website Build
AI Automation & Agents · Autonomous AI Agents · AI Lead Bots	Custom AI Engineering , or Sona if a licensed receptionist fits
Digital Command Center · Revenue Attribution Analytics	BI Command Center
Pro Services (healthcare)	A vertical packaging of Visibility Core + Custom AI Engineering — not a separate pillar
Merch & Print / Branding	Brand Engineering capability; scoped, not a catalog line item
"Free Business Audit"	Gap Evidence Brief (\$0) — and do not call it a free audit

PILLAR 1 — THE "LAND" PILLAR

Brand & Visibility Engineering

Get found by humans and machines: vector search optimisation (VSO), answer engines (AEO), schema, Map Authority, and content engineering.

PRODUCT	WHAT IT IS
Gap Evidence Brief	The front door. An expert needs assessment where we arrive with the gap already found.

AI Visibility Deep-Dive	A productized audit of how a business appears to AI assistants and answer engines. Inbound and warm prospects only.
Visibility Core	The flagship recurring subscription — the "land" engagement.
Visibility Core: Defended	Visibility Core for multi-location businesses or competitive geographies.
Conversion Website Build	A one-time conversion-focused website build. Divi / WordPress, lead capture pages, blogs.
Content Fabric expansion	Add-on module: extra pillar programs, channels, and premium experiences.

WHAT VISIBILITY CORE ALWAYS INCLUDES

Quote this in full when asked what Core covers: the **Multimodal Optimization Stack** (VSO + AEO + TOC + Context + Schema) · **Map Authority** · the **client Second Brain build** · **Content Fabric** (pillars plus derivatives) · a **trained AI assistant** · **concierge access** · a monthly **Asset & Outcome Register**.

The Second Brain is the differentiator, the context engine for every later journey, and the switching cost. It is built at LAND, not held back for later.

PILLAR 2 — THE "TRUST" PILLAR

Financial & Operational Intelligence

Historically the easiest conversation to open, because the pain is already quantified in the client's own books.

PRODUCT	WHAT IT IS	SELLABLE
Cash Audit (Financial Health Audit)	The paid entry door for finance-led conversations. Carries the outcome guarantee.	Yes
Watch My Numbers	Recurring Fractional CFO plus BI.	Yes
Vendor & Subscription Strategy Review	A productized one-time engagement that feeds Watch My Numbers.	Yes
ERP / operations enablement	Scoped ERPNext-class deployment plus ongoing operations.	Yes

Receipts Engine	Licensed app — receipt processing.	Blocked
Items Engine	Licensed app — supplier price intelligence.	Blocked

DO NOT SELL THESE TWO

Receipts Engine and Items Engine are blocked pending the El Gourmet IP resolution. Do not quote them, do not demo them, and do not name them as "coming soon" on a call. If a prospect raises receipt processing or supplier price intelligence, say the team will discuss it and route it internally.

PILLAR 3 — THE "EXPAND FOREVER" PILLAR

Custom AI & BI Engineering

This is where a request for "an AI chatbot" actually belongs — a scoped build, not a subscription product.

PRODUCT	WHAT IT IS
Custom AI Engineering	Scoped agentic AI, integrations and automations, built for one client. The site's "Autonomous AI Agents", "AI Lead Bots" and custom GPT / workflow automation work all land here.
Sona — AI Receptionist	A licensed AI receptionist application.
BI Command Center	Custom dashboards — the site's "Digital Command Center" and "Revenue Attribution Analytics".
Second Brain Concierge	Recurring advisory: AI plus human expert ideation. Included at Visibility Core; available standalone or expanded.
Bespoke agents (RFP Intake Agent class)	Scoped bespoke agent builds, run as a pilot that expands.

The Concierge is the expansion engine: clients ideate with AI plus human experts, and every idea they fall in love with is scoped as a journey module.

VERTICAL

Pro Services — the healthcare line

A patient-acquisition system for regulated practices, sold publicly at [/health-care-services/](#). It is a **vertical packaging** of existing pillar products, not a fourth pillar — quote it as Visibility Core plus Custom AI Engineering.

Public promise: *"Your Practice Deserves a Digital Infrastructure That Works as Hard as You Do."*

Practice types served

Clinics, dental, chiropractic, physiotherapy, massage therapy, mental health, and naturopathic practices.

What the line includes

- Local SEO and Google Business Profile optimisation
- AI-powered booking agent · digital intake forms · automated SMS reminders
- Mobile-first clinic website · service-specific landing pages
- No-show reduction workflows · recall and follow-up sequences
- EMR integration support
- Automated review requests · patient reactivation campaigns · monthly health newsletters

REGULATORY — GET THIS RIGHT OR DON'T TAKE THE MEETING

The public page commits us to **CPSO, CPO and CCO advertising guidelines** for regulated health professionals, **PIPEDA-compliant** data handling and patient communications, and **Canadian data residency** for patient information.

Those are binding commitments, not marketing copy. Before scoping any healthcare engagement that touches patient data, confirm the residency and handling design with the team. Note the page cites PIPEDA — **it does not claim HIPAA or PHIPA**, so do not offer either on a call.

DELIVERY DETAIL

What each public service line actually delivers

Sourced from the live service pages. This is the scope a prospect has already

read before they reach you — know it before the call, and don't promise past it.

Vector Search Optimization

"Vector Search Optimization is how we structure your website so Google and AI systems can clearly understand what you do, where you do it, and why you're a strong match." The framing: *"Your website is now a database. AI doesn't want to send users to your site; it wants the answer now."*

- **Entity extraction** — services, experts and locations mapped into machine-readable data points, with knowledge-graph mapping.
- **Deep schema** — nested JSON-LD architecture with multi-layer validation at code level.
- **Local sync** — site data tied to Google Business Profile APIs for real-time accuracy across Maps, voice and AI agents.
- **Measurement** — deployments hardwired into **Pinnacle BI** for AI impressions, entity coverage and conversion attribution.
- Technical specifics named publicly: **384-dimension embeddings**, semantic density analysis, RAG pipeline optimisation, schema markup for AI crawlers.

Best-fit verticals named on the page: local services, professional services (legal, accounting, consulting), medical and healthcare, home-services contractors.

Map Authority

Positioned against the diagnosis that *"most local businesses fail not because of their craft, but because of their digital foundation"* — unverified profiles, slow sites, manual scheduling, marketing guesswork.

Four phases: **Reclaim** (take control of profiles, clean duplicates) → **Optimize** (apply VSO) → **Activate** (content, review acquisition, traffic drivers) → **Report** (monthly dashboards on calls, clicks, rankings).

GBP Optimization

Split into a one-time structural repair and an ongoing monthly cadence — the clearest scope definition on the whole site, and worth quoting closely.

PHASE 1 — FOUNDATION & STRUCTURAL REPAIR (ONE-TIME)

PHASE 2 — ONGOING MANAGEMENT (MONTHLY)

Baseline audit — categories, NAP consistency, competitor gaps	Weekly GBP posts, entity-rich, written for AI extraction
NAP Master Record standardised across platforms	100% review response within 24 hours
Hours synced across GBP, Yelp, TripAdvisor, DoorDash, Uber Eats	Monthly geo-grid ranking position tracking
AI-optimised description and categories; 10 seeded Q&A pairs	NAP consistency audits
LocalBusiness / FAQ / MenuItem schema deployed	Quarterly photo library rotation (20–25%)
Geotagged photo library, keyword-formatted filenames	Spam and third-party edit monitoring
Citation audit and claiming — Apple Maps, Bing, YellowPages, Canada411	Monthly report: ranking progression plus action plan
Review response protocol documented; Delta Report of all changes	—

AI Automation & Agents

"Autonomous systems that capture leads, respond in seconds, and turn your daily operations into a self-running revenue engine." Four modules:

- **Lead capture & AI reasoning** — intent classification, multi-channel intake, lead scoring, CRM auto-tag.
- **Automated follow-up** — behaviour-triggered campaigns across email, SMS and WhatsApp, with smart timing and A/B variants.
- **Predictive scheduling & booking** — calendar sync (Google Calendar, Calendly, custom), auto-reminders, no-show recovery, reschedule bots.
- **Omnichannel response routing** — unified inbox, smart escalation, sentiment detection, auto-resolution.

Published implementation timeline: Flow Audit (week 1) → Agent Architecture (weeks 2–3) → Pilot Launch on one channel (week 4) → Full Orchestration (week 5+). Treat that as the shape of a scoped Custom AI Engineering build, and confirm it against actual scope before repeating it as a commitment.

Digital Command Center

"Where human intelligence and AI converge — a data-driven digital headquarters with BI frameworks, AI agents, and trust signal architecture working together as one system."

- GA4 with Google Tag Manager; BI-grade event tracking and structured data pipelines
- Visitor behaviour tracking, conversion path analysis, revenue attribution
- Schema markup — LocalBusiness, Service, FAQ
- AI agent architecture for lead qualification and engagement
- Core Web Vitals monitoring; CDN performance engineering; security hardening
- Mobile-first, VSO-native site architecture; multi-step lead capture funnels
- **Post-launch support: 30–60 days depending on scope; 12 months at enterprise scale.** Check which applies before you state it.

Web Pages & Funnels

Four funnel architectures: **Lead Gen LPs** (cold traffic to qualified inquiries) · **Authority Sites** (premium multi-page builds) · **Booking Flows** (frictionless scheduling) · **High-Ticket Pages** (long-form layouts for premium services).

Build method: Strategy → Messaging → Engineering → Optimization — conversion path mapped before design, direct-response copy, lightweight code, then continuous iteration on heatmaps and real behaviour.

Social & Content

"We create content that builds trust, brings visibility, and turns your followers into real customers." Four content types: **captions and posts** · **reels and video** (Instagram, TikTok, YouTube Shorts) · **SEO blogs** · **AI content bots** for engagement and lead routing.

Channels covered: Instagram, LinkedIn, TikTok. Monthly system: The Audit → The Blueprint (content calendar approved by the client) → The Delivery (production, publishing, QC) → The Growth (reporting and optimisation). Remember the firm-wide boundary — **no on-site shoots**; the client captures, we generate.

Branding, Merch & Print

"From uniforms and vehicle wraps to business cards and event kits — we design

brana materials that make people take you seriously before you say a word."

Product types: uniforms and branded shirts · vehicle decals and window vinyl · signs, banners and A-frames · branded envelopes and packaging · event promotion kits · client welcome packs · stickers, tags and inserts · leave-behind flyers and menus.

Process: Brand Audit (week 1) → Design & Mockup (week 2) → Produce & Ship (weeks 3–4) → Reorder & Scale (ongoing). Client receives logo application guidelines, colour and typography specs, print-ready files, mockup previews, reprint-ready templates, production QC, and a reorder workflow with inventory tracking.

TWO THINGS ON THESE PAGES TO BE CAREFUL WITH

The VSO page frames its four pillars as Findable / Trustable / Actionable / Measurable — the retired sequence. The underlying work is correct and current; only the labelling is dead. Describe the pillars by what they do (entity extraction, deep schema, local sync, dashboard), not by the retired names.

The GBP page publishes outcome figures — a stated percentage lift in local search visibility within 90 days and in customer actions. Those are results claims, not scope. Do not repeat them on a call or in a proposal unless you can evidence the number for that specific client.

THE PLATFORM

Authority Platform is a multiplier, not a fourth pillar

The Authority Platform productizes Pillar 1 into software — an Authority Score clients log in to chase. **Do not quote "the platform" as a product.** Quote the AI Visibility Deep-Dive and Visibility Core, which are the things a client actually buys.

ENTRY

Two front doors, and whichever pain is loudest is the door

Both doors converge on the same expansion journeys, so the choice of door is a

diagnosis, not a commitment.

DOOR	ENTRY PRODUCT	LEADS TO	DEFAULT FOR
Visibility	Gap Evidence Brief	Visibility Core	Everything not listed opposite
Finance	Cash Audit	Watch My Numbers	Finance, food, restaurant

TWO RULES ON THE DOORS

The Gap Evidence Brief is never marketed as a "free audit." It is an expert needs assessment delivered by people who have already done the work of finding the gap. That distinction is the entire product — and the live site's four "Free Business Audits" (*Vector Search, Map Authority, GBP, Web Pages & Funnels*) contradict it. Inbound leads will arrive expecting a free audit; reframe on the call.

The AI Visibility Deep-Dive is inbound and warm only. It is a third entry point, never cold-marketed as the free front door.

THE LADDER

Journeys, not tiers — the relationship deepens rather than upgrades

JOURNEY	WHAT IT ADDS	PRODUCTS
Data Maturity	BI, dashboards, decision capacity	BI Command Center, Custom AI Engineering
Financial	Recover value, then watch the numbers	Cash Audit → Watch My Numbers, Vendor & Subscription Review
Operational	Run the operation	ERP enablement, Sona
Agentic AI	Automate the expensive work	Custom AI Engineering, bespoke agents

Approach (Gap Evidence Brief or Cash Audit) → Land (Visibility Core + Second Brain + concierge) → Expand (the four journeys) → Embed (blended concierge, licensed app stack, fractional CFO, defended visibility).

RISK REVERSAL

Three commitments — quote them

exactly, never strengthen them

1. **The First 90 Days Asset Schedule.** A published, week-by-week list of named assets the client will own by Day 90 — Second Brain, schema layer, Google Business Profile rebuild, content pillars, baseline report, dashboard. The offer becomes visible output, not claims.
2. **Baseline-or-Walk.** A measurable baseline is locked at Day 30. If there is no documented movement by Day 90, the client walks with **every asset and makes no further payments**. This is the risk-reversed answer for a cost-sensitive prospect — there is no cheaper tier to drop them into.
3. **The finance-door outcome guarantee.** The Cash Audit finds **\$25,000 or more in recoverable value, or the client does not pay.**

A fourth, published on the site, is covered in the Pricing document: the **30-Day Satisfaction Guarantee**, which is a deliverables-based refund and works differently from the three above.

KILL LIST

Retired names — delete on sight

These names are dead as of the 2026-07-18 catalog consolidation. Do not quote, write, or say them. New quotes use canonical names only.

- | | |
|--|--|
| ✗ Foundation / Growth / Authority (<i>as tier names</i>) | ✗ Brand Marketing Takeover |
| ✗ Findable / Featured / Dominant (<i>as tier names</i>) | ✗ Run My Marketing |
| ✗ Get Found — Lite / Standard / Pro | ✗ Findable → Trustable → Actionable → Measurable |
| ✗ Market Dominance | ✗ Free Visibility Check |
| | ✗ "SARS" |

Existing client invoices keep their original line-item names until renewal — the kill list governs what you *say and write now*, not historical records.

THE WEBSITE IS STILL PUBLISHING THREE OF THESE

`/bbw-services-for-smbs/` presents a three-tier framework as "**Tier 1 (Findable & Trustable) · Tier 2 (Actionable) · Tier 3 (Measurable & Scalable)**" — the retired *Findable → Trustable → Actionable → Measurable* sequence, presented as the tier ladder we no longer sell. The FAQ additionally sells "**Growth**" as a plan name.

Until the site is corrected, expect prospects to arrive asking for "Tier 2" or "the Growth plan." **Do not adopt their vocabulary to be agreeable.** Translate to the catalog, quote catalog prices, and flag the lead so marketing knows the page is still converting on retired names.

ONE CAUTION THE OTHER WAY

"Authority" is retired only as a tier name. It is live and correct in **Map Authority**, **Authority Platform** and **Authority Score**. Brand Marketing Takeover folds into Visibility Core: Defended plus Content Fabric — that is where to take the conversation, not to an apology.

Sources: `Pricing-Reference.md` (ratified 2026-07-18), `OF-offerings.md`, and the seller catalog `catalog.json` v1; reconciled against bigbrainway.com (homepage, `/bbw-services-for-smbs/`, `/health-care-services/`, `/faq/`) read 18 August 2026. Numbers live in the Pricing document — this page is the descriptive overview.
